PAGES 1, 193

## Articles

| AUTHOR   | TITLE   | PAGE |
|--|---|------|
| Hassan Azad,<br>Abdallah Laradji, Asghar Qadir | Focusing surfaces                                       | 404  |
| John Baker and David King                      | Magic Hexagons — Magic Moments                          | 235  |
| C. J. Bradley                                  | A theorem on concurrent Euler lines                     | 412  |
| C. J. Bradley                                  | Hexagons with opposite sides parallel                   | 57   |
| LI. G. Chambers                                | The tercentenary of $\pi$                               | 194  |
| Peter Hilton and Jean Pedersen                 | On generalised Fibonacci and Lucasian numbers           | 215  |
| Guy Inchbald                                   | Facetting diagrams                                      | 253  |
| G. J. O. Jameson                               | Counting zeros of generalised polynomials               | 223  |
| Michael A. Jones and<br>Janet L. Stonick       | The sprinkler problem - a mathematician waters the lawn | 50   |
| A. D. Keedwell                                 | Defining sets for magic squares                         | 417  |
| A. D. Keedwell                                 | Two remarks about Sudoku squares                        | 425  |
| R. W. D. Nickalls                              | Viète, Descartes and the cubic equation                 | 203  |
| Alex Pathan and Tony Collyer                   | A solution to a cubic                                   | 398  |

| AUTHOR                              | TITLE  | PAGE |
|-------------------------------------|--|------|
| Thomas E. Price                     | Products of lengths of line segments associated with elliptical chords | 13   |
| John Rigby                          | Sums of squares of edge-lengths of cyclic polygons                     | 25   |
| S. Rinaldi and D. G. Rogers         | How the odd terms in the Fibonacci sequence stack up                   | 431  |
| G. C. Shephard                      | Interlinked loops  | 249  |
| John R. Silvester                   | Extensions of a theorem of Van Aubel                                   | 2    |
| Sue Singer                          | Sailing through mathematics  | 386  |
| Harry V. Smith                      | Numerical integration -- a different approach                          | 21   |
| Roger Voles                         | The arithmetic of cuckoldry in family trees                            | 209  |
| David A. L. Wilson and Barry Martin | The distribution of the geometric mean                                 | 40   |

## Notes

|          |               |
|----------|---------------|
| March    | 90.01 – 90.30 |
| July     | 90.32 – 90.58 |
| November | 90.59 – 90.88 |

| AUTHOR                                      | NO.   | TITLE  | PAGE |
|---|-------|--|------|
| Tom M. Apostol                              | 90.36 | Bernoulli's power-sum formulas revisited                   | 276  |
| Roy Barbara                                 | 90.24 | A strong result on tiling                                  | 134  |
| Roy Barbara                                 | 90.44 | A triangle formula   | 298  |
| Tony Barnard                                | 90.05 | A metric metre   | 88   |
| J. K. R. Barnett                            | 90.14 | Generalising a 'trigonometric' identity                    | 110  |
| Paul Belcher                                | 90.32 | Powerful numbers   | 262  |
| Bob Burn                                    | 90.08 | No converse to an isomorphism theorem                      | 93   |
| Chao-Ping Chen<br>and Feng Qi               | 90.42 | Extension of an inequality of H. Alzer                     | 293  |
| Robert J. Clarke                            | 90.37 | Different aspects of the cosine rule                       | 279  |
| Vin de Silva                                | 90.23 | A generalisation of Archimedes' hatbox theorem             | 132  |
| José Carlos de Sousa<br>and Oliveira Santos | 90.38 | Another approach to the trisection problem                 | 280  |
| M. N. Deshpande                             | 90.60 | Diophantine triplets revisited                             | 445  |
| Emanuel Emanouilidis                        | 90.73 | Powers of Latin squares                                    | 478  |
| Clement E. Falbo                            | 90.85 | A tale of two problems with the same differential equation | 509  |
| Alan Fearnough                              | 90.67 | A series for the 'bit'                                     | 460  |
| P. Glaister                                 | 90.09 | A variation on Pythagoras' identity                        | 96   |
| Elizabeth M. Glaister<br>and Paul Glaister  | 90.11 | Generalising Alexander's angles                            | 99   |
| Mike Grant                                  | 90.84 | Moments of inertia of a lamina                             | 506  |
| Jonny Griffiths                             | 90.12 | Could $\pi$ be three?                                      | 103  |
| Martin Griffiths                            | 90.30 | How many children?   | 146  |
| Martin Griffiths                            | 90.56 | A lack of memory   | 326  |
| Martin Griffiths                            | 90.68 | Yet another look at the calculus power rules               | 461  |
| Michael D. Hirschhorn                       | 90.04 | The number of partitions of a number into distinct squares | 80   |
| Michael D. Hirschhorn                       | 90.16 | Evaluating $\sum_{n=1}^N (a + nd)^f$                       | 114  |
| Michael Hirschhorn                          | 90.40 | A new version of Stirling's formula                        | 286  |
| Michael D. Hirschhorn                       | 90.43 | On Euler's constant  | 295  |
| Michael D. Hirschhorn                       | 90.54 | The new neighbours problem: a solution                     | 321  |
| Larry Hoehn                                 | 90.47 | A cyclic property of equilateral polygons                  | 308  |

| AUTHOR                                   | NO.   | TITLE  | PAGE |
|--|-------|--|------|
| Larry Hoehn                              | 90.79 | Two proofs of a Pythagorean-like theorem                                     | 490  |
| Graham Jameson and<br>Nicholas Jameson   | 90.65 | Three answers to an integral   | 457  |
| Jeremy D. King                           | 90.63 | Integer roots of polynomials   | 455  |
| Richard Kirby                            | 90.28 | Right answer, wrong reason   | 143  |
| Adam Korányi                             | 90.52 | Tetrahedra and vectors   | 317  |
| Thomas Koshy and<br>Mohammad Salmassi    | 90.01 | Cassini-like formulas for Jacobsthal and<br>Koshy polynomials                | 68   |
| Thomas Koshy                             | 90.50 | Lattice points in a family of hyperbolas                                     | 314  |
| Kavita Laghate and<br>M. N. Deshpande    | 90.58 | Some surprising results associated with permutations                         | 333  |
| Matthew Lee                              | 90.22 | Four circles and a triangle  | 130  |
| Nick Lord                                | 90.06 | Maths bite: two uses for an algebraic identity                               | 88   |
| Nick Lord                                | 90.10 | A trigonometrical surprise: Alexander's angles                               | 97   |
| Nick Lord                                | 90.35 | More on the family of subsets of a finite set                                | 273  |
| Nick Lord                                | 90.61 | When is the product of consecutive triangular<br>numbers a perfect square?   | 448  |
| Nick Lord                                | 90.88 | Poisson's other distribution and a variance inequality                       | 514  |
| Mark McCartney and<br>Sharon Gibson      | 90.83 | Differential equations, traffic dynamics<br>and the $N$ roots of unity       | 502  |
| Philip Maynard                           | 90.03 | Partitioning sets of polygonal numbers                                       | 77   |
| Hiroshi Okumura and<br>Masayuki Watanabe | 90.26 | A right triangle inscribed in a similar right triangle                       | 138  |
| Thomas J. Osler                          | 90.07 | Interesting finite and infinite products<br>from simple algebraic identities | 90   |
| Thomas J. Osler                          | 90.17 | Proof with few words: quadratic convergence of the AGM                       | 116  |
| Juan Pla                                 | 90.34 | On triples of integers having the same sum<br>and the same product           | 267  |
| Juan Pla                                 | 90.62 | On a class of equal sums of unlike powers<br>of rational integers            | 450  |
| Emrys Read                               | 90.45 | On integer-sided triangles containing<br>angles of $120^\circ$ or $60^\circ$ | 299  |
| John B. Reade                            | 90.29 | On the M25 problem   | 144  |
| Anthony C. Robin                         | 90.13 | A simple approximation to $\sin x^\circ$ and polygonal perimeters            | 107  |
| Anthony C. Robin                         | 90.72 | Circular wife swapping   | 471  |
| Anthony C. Robin                         | 90.87 | What is the probability that the angle sum<br>of a triangle is $180^\circ$ ? | 513  |
